GIS Services

Consultancy, Data, Analysis, Training & Support

Providing the GIS mapping, consultancy and support services that are assisting organisations to access and exploit the potential of their geographic information.

Driven by a passion for all things location, our services have helped public and private sector organisations visualise their data to drive more effective commercial decisions that spur growth, improvements and further business success.

Supported by one of the largest teams of GIS professionals in Ireland, our GIS services will help you to better understand your geographic information, delivering fresh insights that produce actionable results.

Benefits of GIS

✓ Visualise complex information in a manner that is clear & easy to understand

✓ Turn your information into actionable insights

✓ Take better more informed business decisions

✓ Gain fresh insight into your data & identify new business solutions

✓ Improve collaboration & communication across teams

✓ Implement measures to drive down operational & business costs

Experience

We have over two decades worth of experience providing GIS services to customers in both the public & private sectors.

Working closely alongside our customers, we provide services with the flexibility, expertise and focus to complete any GIS project. Backed up by continual support and maintenance, our solutions will ensure you access the full potential of your geographic information.

With an extensive range of GIS services, we have helped organisations to deliver the insights that are informing critical decision making and driving further business success.

Our GIS Services

- ✓ GIS Consultancy - independent advice & support that can be trusted to extract new insight from your data

- ✓ Data Conversion - we can convert your spatial data for use in any GIS platform or service

- ✓ PRIME2 - specialising in the integration of your data with PRIME2, OSi's newest spatial data model

- ✓ Geo-referencing - digitally capturing data held on paper maps for further analysis within a GIS

- ✓ Spatial Analysis - better understand your geographic data to answer questions, support decisions & reveal new patterns

- ✓ Geocoding - transform your address data into a valid map location using Eircode & GeoDirectory databases

- ✓ Data Capture - capturing data & assets for use & analysis in a GIS, compliant with ISO 9001 & EU INSPIRE standards

- ✓ Project Management - our team of PRINCE2 certified practitioners can support the delivery of any GIS project
